**Our clients biggest
concerns answered...**

"I can't renovate while living in the house... or can I?" Renovating While Living On-Site; Yes, It's Possible.

realzar project - HAZELDEAN | image © by @t.studio

A primary concern for homeowners considering renovation is the cost and disruption of relocating. While valid, this risk can be strategically mitigated through disciplined planning and coordination. At Realzar, our coordination-led approach enables clients of smaller scale projects, to remain in their homes throughout construction. Through structured trade sequencing, proactive communication, and tightly managed scheduling, we deliver efficient outcomes with minimal disruption to daily life.

TESTIMONIAL: *'The tradespeople were punctual and respectful of our home and completed the work to a high standard - in that, Paola came every couple of days to make sure everything was perfect and on task. From the initial meeting, the mood boards, the payments and the rigorous schedule, the process went smoothly, and we are delighted with the improvements that have been made. Overall, the experience was excellent and we are grateful for Realzar's dedication and good humour.'* - Project Hazeldean clients

Project Haley and Project Hazeldean are two of our most recent examples; both successfully completed while the clients remained living on-site. With Realzar’s guidance, structured coordination, and planning expertise, these projects prove that with the right approach, renovating while living in your home is not only achievable but can be stress-free and rewarding.

✨ Considering a renovation but hesitant about the logistics? Let Realzar show you how to make it work; efficiently, safely, and seamlessly.
