The Indoor - Outdoor Connection Every Australian Home Needs

More space to enjoy, without adding extra square metres.

Open up the possibilities

realzar project - Cumberland

A thoughtful connection between indoor and outdoor living can completely transform the way a home looks, feels and functions.

It can also allow us to introduce natural light, making a home feel more spacious and better suited to enjoyable everyday living and great for entertaining.

Stacker doors and expansive sliding glass doors or large windows can create generous openings between indoor living areas and outdoor spaces.
The important element to include as part of the installation is a good fly screen system that helps to keep bugs out when entertaining.

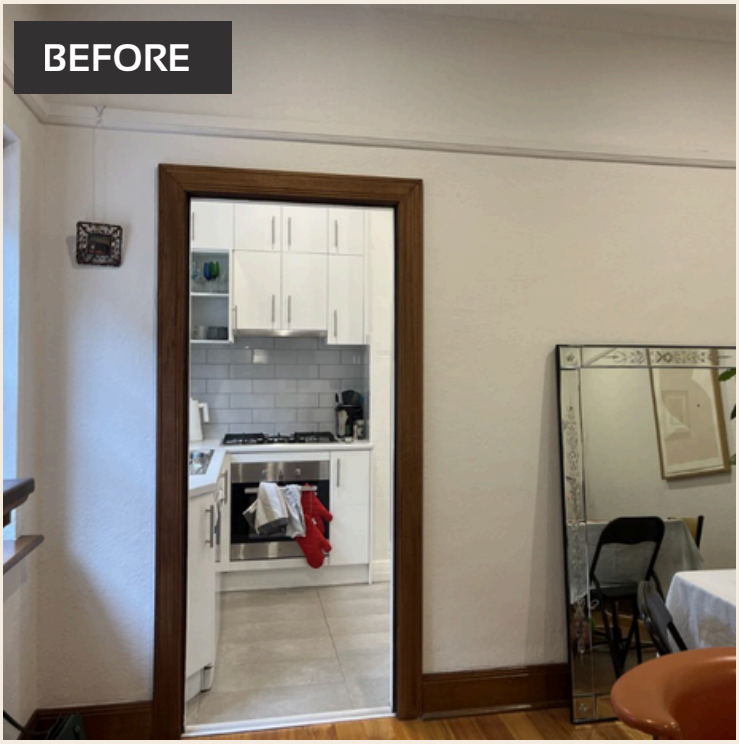

Connecting kitchens, dining areas and living spaces to an alfresco zone also provides flexibility to cater for a larger crowd.

A cohesive palette of materials and finishes helps the spaces feel connected.

At Project BOONDARA, removing an internal wall transformed the once-separated kitchen, living and dining areas into one connected space.

Additionally, an enlarged rear opening, introduced more natural light and strengthened the connection to the outdoor dining space, creating a welcoming environment for a young family to gather, relax and entertain.

Now our client can enjoy a weekend barbecue, a family celebration or a quiet morning coffee, in this thoughtfully integrated home.

They are loving their everyday living in a Mid-Century re-designed home.

Clients who are planning to enjoy 2027 with a connected indoor and outdoor are starting their renovation now.

Planning a renovation, extension or new build?
Connect with Realzar to create a home that enhances enjoyment, balances beauty, function, good spatial planning while also increase the asset's long-term value.
